

Daily Workflow For The 3PL Team

Customers place orders through the GEA frontend. Shopify handles the order and payment. Supercycle tells the team exactly what to ship, receive, inspect, and restock. Membership plans are billing only, so the team ships jewelry selections, not the plan itself.

GEA FRONTEND

SHOPIFY ORDER

SUPERCYCLE OPS

10-Step Daily Use Guide

01

Check today's shipments

Open Supercycle Reservations and filter for rentals that need to ship today.

02

Open the rental record

Check the customer, product, assigned item, serial number, and linked Shopify order.

03

Pull the exact serial

Pick the exact physical jewelry piece shown in Supercycle, not just the product name.

04

Create the shipping label

Open the linked Shopify order and create the shipping label there or in your shipping tool.

05

Fulfill in Shopify

Mark the shipment fulfilled in Shopify so Supercycle updates the rental as out with the customer.

06

Track live rentals in Supercycle

Use Supercycle as the source of truth for what is preparing, shipped, returning, received, or restocking.

10-Step Daily Use Guide

07

Check the returns queue

Open Supercycle Returns every day and review which packages are coming back.

08

Mark items received

When a return arrives, open the return in Supercycle and mark the item as received.

09

Inspect and note condition

Check the jewelry, log wear or damage, and decide whether the piece is ready or needs repair.

10

Restock or hold for repair

Once cleaned and approved, mark the item ready in Supercycle so it can be rented again.

5 Pointers That Keep Operations Smooth

1

Match the serial every time

Always confirm the exact item and serial in Supercycle before packing anything.

2

Fulfill in Shopify, not only in Supercycle

Shipping and fulfillment should be completed in Shopify so both systems stay in sync.

3

Watch Reservations and Returns daily

Most rental issues happen when one of these two queues is not checked on time.

4

Receive and inspect returns quickly

The faster returns are received, inspected, and restocked, the more accurate availability stays.

5

Log condition notes right away

If a piece has damage, missing packaging, or unusual wear, record it immediately for the next team member.
